

**Amendments to the Specification**

Please amend the paragraph beginning at page 2, line 27, as follows:

US-A 3,147,856 (Figure 3), EP-A-0911266 (Figure 2) and ~~DE-86183688U DE~~  
8618368U (Figure 2) describe boxes similar to those of the two aforementioned patents, but  
in which the flap defining (with the box outer wall to which it is parallel and from which it is  
spaced) the pocket in the box interior has its free end folded at 90° about itself to form a tab  
(indicated by the reference numeral 42 in US-A-3147856, by the numeral 16 in EP-A-  
0911266 and by the numeral 11 in DE 8618368U) which is glued to the adjacent main side  
wall of the box. These boxes present serious drawbacks, consisting of the fact that as the  
aforesaid flap has to be glued to the main wall during production of the boxes, which are  
despatched to the user firms as packs of identical boxes flattened against themselves, it  
becomes impossible to produce the boxes. To better understand this problem, it will be  
assumed that the boxes of Figure 3 of US-A-3147856 and Figure 2 of EP-A-0911266 have to  
be flattened against themselves (as shown in Figure 2 of US-A-3147856) to be able to be  
stacked and despatched to the user. If the flaps 42 and 16 of the two boxes respectively are  
glued to the adjacent main surfaces of the boxes, it becomes impossible to flatten the boxes  
without damaging them; likewise the boxes cannot be brought from their flattened state to  
their shaped state, ready for inserting into them the products which they have to contain.

Page 12, beginning with line 1, amend the abstract as follows.
